

Initial Requirements (TF-1.3.1 on RHEL7.4 with CPU only)

1. For installing scipy dependencies i.e.atlas-devel.ppc64le blas-devel.ppc64le lapack-devel.ppc64le you need to enable following repo on RHEL7.4 –

`yum-config-manager --enable "rhel-7-for-power-le-optional-beta-rpms"`
2. Additionally, three patches are required to build Tensorflow v1.3.1-CPU-only on ppc64le using the build script.
 - These patches are provided along with the build script,
 - Please keep these patches on correct location while running the build script, otherwise build will fail
 - Suppose your TF build script is copied inside the /home/tf directory, then put all three patches inside the /home/tf/patches directory.
